

Richard Sprague, CEO of Opticare AI, is a healthtech industry veteran with decades of experience managing teams at Apple, Microsoft, and startups in Silicon Valley, Japan and China. He is currently based near Seattle, on Mercer Island.

Discover the untapped potential of the human eye as a diagnostic tool in this groundbreaking exploration of modern imaging techniques. More than a marvel of visual perception, the eye's intricate vascular and neural structures provide a unique, non-invasive view into overall health. Through advancements in fundus photography and artificial intelligence, subtle retinal changes now reveal insights into systemic conditions, transforming diagnostic medicine and preventive care.

Understand the science behind retinal imaging, its clinical applications, and the innovative role of Opticare in shaping the future of personalized health management. Join us on this journey to uncover the profound connection between the eye and the body, redefining how we see health and wellness.
